

## **The complaint**

Mr S complained that he was given unsuitable advice to transfer his defined benefit (DB) British Steel Pension Scheme (BSPS), to a type of personal pension plan, in 2017.

David Stock & Co Limited is responsible for answering this complaint and so to keep things consistent, I'll refer to that company mainly as "David Stock".

## **What happened**

In March 2016, Mr S's employer announced that it would be examining options to restructure its business, including decoupling the BSPS from the company. The consultation with members referred to possible outcomes regarding their preserved benefits, which included transferring the scheme to the Pension Protection Fund (PPF), or a new defined benefit scheme (BSPS2). Alternatively, members were informed they could transfer their benefits to a personal pension arrangement.

In May 2017, the Pension Protection Fund (PPF) made the announcement that the terms of a Regulated Apportionment Arrangement (RAA) had been agreed. That announcement said that, if risk-related qualifying conditions relating to funding and size could be satisfied, a new pension scheme sponsored by Mr S's employer would be set up – the BSPS2.

In October 2017, members of the BSPS were being sent a "Time to Choose" letter which gave them the options to either stay in BSPS and move with it to the PPF, move to BSPS2 or transfer their BSPS benefits elsewhere. The deadline to make their choices was 11 December 2017 (and was later extended to 22 December 2017).

Mr S was concerned about what the announcement by his employer meant for the security of his preserved benefits in the BSPS. He was unsure what to do and was referred to David Stock which is responsible for providing the pension advice. Information gathered about his circumstances and objectives at the time of the recommendation were broadly as follows:

- Mr S was 40 years old, married and with two dependent children and one young adult child. He was described as being in good health and at the time.
- Mr and Mrs S lived in a home which was rented. Mr S worked in the steel industry and Mrs S worked part-time.
- The cash equivalent transfer value (CETV) of Mr S's BSPS was approximately £250,803. The normal retirement age (NRA) was 65.
- Mr S had joined the new TATA defined contribution (DC) pension scheme as a consequence of the BSPS ceasing new contributions.

In common with a number of similar David Stock clients of that time, it seems Mr S had several advice sessions with the business in the autumn of 2017 until his pension was eventually transferred in early 2018.

The business set out its advice initially in a suitability report in November 2017. There were further discussions about the types of investments he might move his funds into. Ultimately, David Stock recommended that Mr S transfer away to a personal pension and use a discretionary fund manager (DFM) to manage his funds and fund selection in the future. David Stock facilitated this and said this would allow Mr S to achieve his objectives. Mr S accepted this advice and so transferred out.

In November 2021 Mr S complained to David Stock about its advice, saying he shouldn't have been advised to transfer out to a personal pension. He was sent a final response letter (FRL) by the business in December 2021. David Stock said it hadn't done anything wrong and was acting on the financial objectives Mr S had at the time.

Mr S referred his complaint to our Service in April 2022 which is within the six months allowed from the FRL. One of our investigators looked into the complaint and said it should be upheld.

As this complaint can't be resolved informally, it's come to me for a final decision.

### **What I've decided – and why**

I've considered all the available evidence and arguments to decide what's fair and reasonable in the circumstances of this complaint.

I've also taken into account relevant law and regulations, regulator's rules, guidance and standards and codes of practice, and what I consider to have been good industry practice at the time. This includes the Principles for Business ('PRIN') and the Conduct of Business Sourcebook ('COBS'). Where the evidence is incomplete, inconclusive or contradictory, I reach my conclusions on the balance of probabilities – that is, what I think is more likely than not to have happened based on the available evidence and the wider surrounding circumstances.

#### *The applicable rules, regulations and requirements*

The below is not a comprehensive list of the rules and regulations which applied at the time of the advice, but provides useful context for my assessment of David Stock's actions here.

- *PRIN 6: A firm must pay due regard to the interests of its customers and treat them fairly.*
- *PRIN 7: A firm must pay due regard to the information needs of its clients, and communicate information to them in a way which is clear, fair and not misleading.*
- *COBS 2.1.1R: A firm must act honestly, fairly and professionally in accordance with the best interests of its client (the client's best interests rule).*
- The provisions in COBS 9 which deal with the obligations when giving a personal recommendation and assessing suitability and the provisions in COBS 19 which specifically relate to a DB pension transfer.

I have further considered that the regulator, the Financial Conduct Authority ('FCA'), states in COBS 19.1.6 that the starting assumption for a transfer from a DB scheme is that it is unsuitable. So, David Stock should have only considered a transfer if it could clearly demonstrate that the transfer was in Mr S's best interests.

I've used all the information we have to consider whether transferring away from the BSPS to a personal pension was in Mr S's best interests. I have also carefully considered the FRL from David Stock. I've carefully considered too, the various other responses made to the points contained within our investigator's view.

Having done all this, I'm upholding Mr S's complaint.

### Financial viability

David Stock referred in its transfer analysis and suitability report to 'critical yield' rates. The critical yield is essentially the average annual investment return that would be required on the transfer value - from the time of advice until retirement - to provide the same annuity benefits as the DB scheme.

The critical yield comparison was a requirement from the regulator at the time when advising clients on DB transfers. It's also important to point out that the critical yield comparison is only one of a number of different metrics I've used to compare the different schemes. And in my view, these all point one way – that Mr S was probably going to receive lower pension benefits overall, as a result of transferring to a type of personal pension plan.

David Stock said that the critical yield required to match the benefits at the age of 65 in the BSPS, was 4.56% if Mr S took a pension without a tax-free lump sum. If taking a tax-free lump sum, the adviser implied the critical yield would be slightly lower but there was no apparent analysis or accurate critical yield to evidence this. David Stock also didn't calculate a critical yield rate for an earlier retirement as there was nothing to say Mr S had expressed a desire to retire early. However, as I'll explain more about later, retirement was still a very long way off for Mr S.

I've also noted that David Stock's analysis was somewhat out of date in that it was making comparisons with the 'old' BSPS. It's true there were still final points yet to be agreed regarding the new pension scheme (BSPS2). But by the time this advice was given, in November 2017, much more about the BSPS2 was known and David Stock was able to update things like the original BSPS critical yield rates which would have probably been calculated some weeks or months before. I'm also aware David Stock was advising a number of clients in very similar situations, so I think the analysis here should have been updated in order to provide Mr S with as much information as he needed to make an informed choice.

In 2017 we were in a period of sustained low interest rates and bond yields. And I don't think that there was any sound evidence that achieving enough growth outside the DB scheme, to make transferring financially viable, was ever going to be achievable over a sustained period. I say this with the following in mind.

The advice was given after the regulator gave instructions in Final Guidance FG17/9 as to how businesses could calculate future 'discount rates' in loss assessments where a complaint about a past pension transfer was being upheld. Prior to October 2017 similar rates were published by the Financial Ombudsman Service on our website. Whilst businesses weren't required to refer to these rates when giving advice on pension transfers, they provide a useful indication of what growth rates would have been considered reasonably achievable for a typical investor.

The relevant discount rate closest to when the advice was given which I can refer to was published by the Financial Ombudsman Service for the period before 1 October 2017 was only 4.6% per year for just over 24 years to retirement (age 65). I've also kept in mind that the regulator's upper projection rate at the time was 8%, the middle projection rate was 5%,

and the lower projection rate was 2%. I've seen there were quite similar growth assumptions from the fund provider which was being considered suitable for Mr S. For example, its low-end growth assumption was also 2% and the medium rate was 5%.

At the time, David Stock assessed Mr S's attitude to risk (ATR) as "moderate". However, I think Mr S was a very inexperienced investor. There's nothing showing he owned any shares at the time and there's reliable documentary evidence that he didn't want to accept much investment risk. His overall financial assets appeared very modest and he was renting a family home, as opposed to owning one at the time. I've seen nothing showing that Mr S had any investment experience at all to draw upon. So, when thinking about investing this amount of money, I don't think the adviser categorised Mr S's ATR correctly. Overall, the assessment of his financial circumstances and wealth seems very weak to me and I don't think Mr S had much capacity for loss.

Against this backdrop I think the ATR, if correctly applied, was more likely to be a "low" rating. Mr S may well have answered some generic questions about risk on a pre-formatted form, but the adviser's role was to interpret this together with Mr S's real-life situation. I therefore think any reasonable risk assessment of Mr S – a person with absolutely no investment experience or history - should have been applied in a more conservative manner.

With all this in mind, I don't think the adviser had enough information or evidence to recommend transferring away from a DB scheme based on a financial comparison basis. Growth assumptions close to the regulator's lower-end projections and also to the discount rate were most relevant here in my view. So, I think growth assumptions of around 2 -to-4½ % were realistic here. Whilst this was near to the critical yield figure for the BPSs, there is no clear evidence that by transferring away he'd be financially better off. In fact, it's very important to remember here that the effect of charges and fees associated with a personal pension such as the one being recommended to Mr S, would have further reduced the likely growth. Mr S was being charged fees by David Stock – and there were fund and management charges yet to come from the recommended DFM. These were all additional costs that I think Mr S would have found very difficult to work out. With a DB scheme he didn't have these costs.

So, I think all this showed there would be a very real 'drag' on performance. To even match the published critical yield rates, Mr S's investments would need to exceed beyond what I think David Stock was telling him. Overall, I think that achieving the 'stated' and 'unstated' critical yield figure(s), year-on-year, upon transferring out, was unlikely when looked at through the prism of 2017.

In my view, there would be little point in irreversibly transferring away from a DB scheme at the age of 40 to obtain lower – or even similar benefits – to that scheme. There would be still less reason to take that course of action after deducting the fees and charges. These things all clearly implied growth level outside the DB scheme would probably be lower. So there was a very real risk of Mr S's pension benefits being lower at retirement than they otherwise would be.

I've also noted that using the NRA of 65, David Stock's own transfer analysis said that even in order to purchase an annuity to provide benefits of equal value to the benefits provided by the existing scheme, assuming *no* spouse's pension, *no* increases in payment and *no* guarantee at retirement, the estimated fund required at 65 was £367,735. These figures are found in David Stock's own analysis based on data the regulator required businesses to refer to at the time. To be clear, the sum above was to buy a much *inferior* pension. And because this was far above Mr S's CETV, it represents, in my view, a revealing window into the value of the guaranteed pension Mr S could be giving up by transferring away to a personal plan, rather than a similar DB scheme that was on offer here.

Elsewhere in its transfer analysis, David Stock also made mention of the PPF, which it described as a compensation scheme providing a “*safety net*” for pension schemes when the sponsoring employer becomes insolvent. David Stock said the critical yields to match the benefits available through the PPF at age 65 were lower. But these yields related to the *reduced* benefits available with the PPF and I don’t think Mr S would have wanted to transfer to this scheme. Again, there were no critical yields for retiring earlier and I reiterate that the effect of charges and fees associated with a personal pension such as the one being recommended to Mr S, would have further reduced the likely growth.

I therefore think it’s fair to say that from a financial comparison perspective, David Stock’s own figures, shown in its suitability report and transfer analysis documents, showed that transferring to a personal pension plan would mean Mr S would likely receive lower pension benefits in the longer term, when compared against the option of the BPS2.

I’ve also considered some projections David Stock used to help show that if he transferred out to a personal plan, the funds could last Mr S well into retirement. Again, I think most of these were based on growth projections which were based on past performance and they ran out at certain ages. It’s also fair to say these were not comparing like-with-like. What David Stock was showing Mr S were comparisons with plans which lacked the guarantees and benefits of a DB scheme.

Of course, according to David Stock, its recommendation that he should transfer out to a personal pension was not wholly based on the financial comparisons with his current scheme options alone. Rather, David Stock said Mr S also had other reasons to transfer away, so I’ve thought about all the other considerations which might have meant a transfer was suitable for him, despite providing the overall lower benefits mentioned earlier.

#### *Other reasons to transfer*

David Stock recommended and transacted a transfer to a personal pension plan based on what it said were Mr S’s wider objectives. These weren’t comprehensively listed by the adviser. Overall, I think the suitability report was a poor document. This was the adviser’s opportunity to set out clearly what the options were and the rationale behind any recommendations that were being made. In my view, it lacked clarity. But I have used all the documents we still have from the advice sessions to summarise the following themes as supporting the recommendation to transfer away.

David Stock said that by transferring, he could have greater flexibility and control over his pension. This included enabling the full value of any pension fund being inherited as a death benefit tax-free. Mr S was also clearly worried about the financial security of the DB scheme(s) on offer. I have therefore considered all these and other issues.

- *Mr S’s age*

I think it’s important to focus for a moment here on Mr S’s comparatively young age by pension standards. The evidence I’ve seen here is that Mr S had no concrete plans whatsoever for his retirement. With over 24 years still left to when he’d be actually contemplating retiring if using his NRA, there’s simply no way that what he might possibly use the money for, or how much he thought he might need, should have been major influences in him deciding to irreversibly move away from a DB scheme. Doing so involved an investment risk which I’ve showed above could mean lower overall financial benefits at retirement.

- *Flexibility*

The advice said, *“the flexibility of a personal pension has an enormous pull”*. However, I think the concept of flexibility was no more than a ‘standard’ objective used to help justify the recommendation to transfer out to a personal plan. In my view, the suitability report wasn’t personalised enough to Mr S’s particular circumstances.

In fact, I can’t see that Mr S required flexibility in retirement in the way the adviser suggested. In any event, flexibility was poorly defined. For example, I’ve seen nothing that showed Mr S required changing how his retirement benefits ought to be paid. I don’t think this could have been predicted whilst still so far away from retirement age. He already had a new and more flexible DC pension with the new TATA DC fund. This was being substantially contributed towards by both Mr S and his employer and still had up to 24 years left to run. So, this other pension would have afforded Mr S any flexibility he might have needed in the years ahead.

On this specific point, I think the suitability report was very unclear. It even said at one point that *“our reaction is to generally dissuade you, as to an extent that is our role, and to highlight the major disadvantage of managing your own pension...”*. I take this to mean that the adviser themselves had some reservations – but went on, nonetheless, to recommend that Mr S ought to transfer to a specific product overseen by a DFM.

However, I’ve seen nothing explaining why Mr S wouldn’t want to continue membership of a DB scheme and to use that scheme in exactly the way it was originally intended. Indeed, I think that by retirement, whenever it eventually came, Mr S could have been in a relatively good financial position. On one hand he’d have an existing deferred DB scheme of considerable value. This would contain all the guarantees and benefits that such schemes normally bring which tend to include a promise to pay a known pension for life. Significant indexation guarantees also existed within BPS2 and the scheme was still underpinned by the PPF. On the other hand, he’d have also built up a substantial DC scheme over a long period of time – up to 24 years. So, if Mr S ever found he needed any flexibility, then he’d be able to use his DC scheme, rather than transferring away from the BPS.

I’ve also seen no evidence that Mr S had either the capacity or desire to exercise control over his funds. With his DB scheme, Mr S was being offered the opportunity to transfer to the new BPS2. It’s true there were some differences in this scheme when compared to the original BPS, but it remained a DB scheme nonetheless and was run for him by trustees. Mr S himself had no experience of these types of ‘money market’ investments. I accept that he may have had a very basic understanding of pensions and he also had his new DC pension with TATA. But I’ve seen nothing showing the investment strategy for this DC pension was anything other than an ‘off the shelf’ mix of investments commonly found in most company DC schemes. So, I think he would have found the complexity, scale and responsibility of managing over £250,000 of transferred funds to be onerous in the years ahead. What I’ve seen tends to show Mr S would have required ongoing financial advice and support, all of which would cost him money which his DB scheme didn’t require from him.

David Stock itself set out the estimated pension he’d get under the BPS. In my view, this showed a reasonable income in retirement. However, I’ve already explained the unpredictability of assessing retirement needs so far in advance and at such a relatively young age. Mr S might have even speculated that he might need a certain amount of annual pension when he retired, cited in ‘today’s’ money. However, in my view this could only ever be guesswork because retirement was decades away for Mr S.

I think Mr and Mrs S were likely to have normal growing costs to pay in the years ahead; they still had dependent children and I’m sure they also would have wanted to help their children as much as possible as they became young adults. I’ve also noted they rented a property rather than owned one so I think this added a degree of uncertainty for them. And

Mr S, in my view, could also realistically be said only to be in 'mid-career'. All these things are just examples – but I think they demonstrate how Mr and Mrs S had many years of family life and its challenges still ahead. There's simply no reason for me to address any estimated retirement income in these circumstances or whether this was considered correctly during the advice sessions. This is because this was all so far away in the future. In reality, no-one could yet predict what their retirement would look like. Transferring was clearly unsuitable whilst still only in their early 40s.

I therefore think Mr S's circumstances here were much more aligned to him transferring to BPS2 and retiring from that when he felt he was ready to do so. All the evidence pointed to him being able to build a pathway in the years ahead to retiring earlier than 65 if he felt he really needed to. There would have been an actuarial reduction involved, depending on his age at the time. And because Mr S had another pension too, there was the capacity for him to increase contributions to this new DC scheme.

- *Death benefits*

Death benefits are an emotive subject and of course when asked, most people would like their loved ones to be taken care of when they die. The BPS2 contained certain benefits payable to a spouse and children if Mr S died. Mr S was married and had children so I think the value of these benefits were most likely underplayed because the spouse's pension provided by the BPS2 would have been useful to Mrs S if he predeceased her. Mrs S had brought up three children and there's no evidence her own pension provision was large. I therefore don't think David Stock made the value of this spouse benefit clear enough. This was guaranteed and it escalated – it was not dependent on investment performance, whereas the sum remaining on death in a personal pension was.

I think the adviser told Mr S that he'd be able to pass on the value of a personal pension, potentially tax-free, to anyone he nominated and that a DB pension was more restrictive in this regard. So, the lump sum death benefits on offer through a personal pension was probably made to look like an attractive feature to Mr S.

But whilst I appreciate death benefits are important to consumers, and Mr S might have thought it was a good idea to transfer the BPS to a personal pension because of this, the priority here was to advise him about what was best for his retirement provisions. A pension is primarily designed to provide income in retirement. And I don't think David Stock explored to what extent Mr S was prepared to accept a different retirement income in exchange for different death benefits.

Mr S was still only 40 and in good health. An obvious drawback with a personal plan's death benefits is that the amount left to pass on – to anyone – may be substantially reduced as the pensioner starts to withdraw his or her retirement income. To this end, if Mr S had lived a long life there could be nothing left at all in his personal pension plan.

I can't say if, or to what extent, life insurance was discussed here. But at 40 years old, a 'term' life insurance policy would have been a reasonably affordable product if Mr S really did want to leave a large lump sum legacy, rather than an annual pension, for a specific relative or someone other than a spouse. I have to say there isn't any evidence this was ever the case. But in any event, it doesn't appear that David Stock took into account the fact that Mr S could have nominated a beneficiary of any funds remaining in his other DC scheme. It's easy to dismiss this because at the time this had only really just started. But this DC pension would have seen decades of contributions in the times ahead. So, to this end, Mr S already had plenty of options ensuring part of his pension wouldn't 'die with him'. There was no need to transfer.

Overall, in this case I don't think different death benefits available through a transfer to a personal pension justified the likely decrease of retirement benefits for Mr S. I think this objective was no more than a generic comment and not meaningful to Mr S's situation.

- *Concerns over financial stability of the DB scheme*

It's clear that Mr S, like many employees of his company, was concerned about his pension. His employer had recently made the announcement about its plans for the scheme and David Stock said he lacked trust in the company. He'd heard negative things about the PPF and David Stock said he could have more control over his pension fund.

So, it's quite possible that Mr S was also leaning towards the decision to transfer because of the concerns he had about his employer and a negative perception of the PPF. However, it was David Stock's obligation to give Mr S an objective picture and recommend what was in his best interests.

By the point of the advice being delivered details of BPS2 were known and it seemed likely it was going ahead. So, I think this should have alleviated any concerns about the scheme moving to the PPF.

However, even if there was a chance the BPS2 wouldn't go ahead, I think that David Stock should have reassured Mr S that the scheme moving to the PPF wasn't as concerning as he thought. The income available to Mr S through the PPF would have still probably provided a significant portion of the income he would have needed at retirement, and he was still unlikely to be able to exceed this by transferring out, given his ATR and the effect of pension charges and fees. And although the increases in payment in the PPF were lower, the income was still guaranteed and was not subject to any investment risk. So, I don't think that these concerns should have led to David Stock's recommendation to Mr S to transfer out of the DB scheme altogether.

#### Use of a DFM and suitability of investments

David Stock recommended that Mr S invest his funds in a personal pension and use a DFM to manage them. As I'm upholding the complaint on the grounds that a transfer out of the DB scheme wasn't suitable for Mr S and I don't think he would've insisted on transferring out of the scheme if clear advice had been given to him, it follows that I don't need to consider the suitability of the investment recommendation. This is because he should have been advised to remain in the DB scheme and so the investment in the new funds wouldn't have arisen if suitable advice had been given.

#### Summary

I don't think the advice given to Mr S was suitable.

I've noted that in many of the documents I've seen in this case, David Stock attempts to distance itself from overall responsibility by implying that Mr S was told about the risks of transferring and that it was him who was driving the transferring agenda. However, I think it's important to remember that it was David Stock that was the regulated party here, not Mr S. He wasn't an experienced investor and so he went to David Stock with a reasonable expectation that he would be advised by someone with the knowledge and experience to recommend what was in his best interests. He was also paying a significant sum for this advice.

So, David Stock's job as the regulated firm wasn't simply to transact what Mr S – an inexperienced amateur – might have thought was a good idea. The adviser's job here was to

really understand his circumstances and make clear recommendations with associated rationale behind them. I think David Stock comprehensively failed to do this in Mr S's case. He was giving up a guaranteed, risk-free and increasing income within the BSPS2. By transferring to a personal pension, the evidence shows Mr S was likely to obtain lower retirement benefits. And I don't think there were any other particular reasons which would justify the transfer and outweigh this.

I therefore don't think it was in Mr S's best interests for him to transfer his DB scheme to a personal pension when he had the opportunity of opting into the BSPS2. On this basis, I think David Stock should have advised Mr S to opt into the BSPS2.

I think it was clear to all parties that the BSPS2 was likely to be going ahead. Mr S still had many more years before he intended to retire and it was far too early to predict what his retirement might look like. I don't think that it would have been in his interest to accept the reduction in benefits he would have faced by the scheme entering the PPF, as it wouldn't be offset by the more favourable reduction for very early retirement. But by opting into the BSPS2, Mr S would have retained the ability to transfer out of the scheme nearer to his retirement age if he needed to. The annual indexation of his pension when in payment was also more advantageous under the BSPS2.

I have considered, given the circumstances of the time, whether Mr S would have transferred to a personal pension in any event. I accept that David Stock disclosed some of the risks of transferring to Mr S, and provided him with a certain amount of information. But ultimately it advised Mr S to transfer out, and I think Mr S relied on that advice. I'm not persuaded that Mr S would have insisted on transferring out of the DB scheme, against David Stock's advice. He was an inexperienced investor and this pension accounted for virtually all of his retirement provision at the time. So, if David Stock had provided him with clear advice against transferring out of the DB scheme, explaining why it wasn't in his best interests, I think he would have accepted that advice.

In light of the above, I think David Stock should compensate Mr S for the unsuitable advice, using the regulator's defined benefits pension transfer redress methodology.

### **Putting things right**

A fair and reasonable outcome would be for the business to put Mr S, as far as possible, into the position he would now be in but for David Stock's unsuitable advice. I consider Mr S would have most likely opted to join the BSPS2, rather than transfer to the personal pension if he'd been given suitable advice and compensation should be based on his normal retirement age of 65, as per the usual assumptions in the FCA's guidance. David Stock should use the benefits offered by BSPS2 for comparison purposes.

David Stock must therefore undertake a redress calculation in line with the rules for calculating redress for non-compliant pension transfer advice, as detailed in policy statement PS22/13 and set out in the regulator's handbook in DISP App 4:  
<https://www.handbook.fca.org.uk/handbook/DISP/App/4/?view=chapter>.

David Stock should use the FCA's BSPS-specific redress calculator to calculate the redress. A copy of the BSPS calculator output should be sent to Mr S and our Service upon completion of the calculation together with supporting evidence of what David Stock based the inputs into the calculator on.

This calculation should be carried out using the most recent financial assumptions in line with DISP App 4. In accordance with the regulator's expectations, this should be undertaken

or submitted to an appropriate provider promptly following receipt of notification of Mr S's acceptance of my final decision.

If the redress calculation demonstrates a loss, as explained in policy statement PS22/13 and set out in DISP App 4, David Stock should:

- calculate and offer Mr S redress as a cash lump sum payment,
- explain to Mr S before starting the redress calculation that:
  - the redress will be calculated on the basis that it will be invested prudently (in line with the cautious investment return assumption used in the calculation), and
  - a straightforward way to invest the redress prudently is to use it to augment the DC pension
- offer to calculate how much of any redress Mr S receives could be augmented rather than receiving it all as a cash lump sum,
- if Mr S accepts David Stock's offer to calculate how much of the redress could be augmented, request the necessary information and not charge Mr S for the calculation, even if he ultimately decides not to have any of the redress augmented, and
- take a prudent approach when calculating how much redress could be augmented, given the inherent uncertainty around Mr S's end of year tax position.

Redress paid to Mr S as a cash lump sum will be treated as income for tax purposes. So, in line with DISP App 4, David Stock may make a notional deduction to cash lump sum payments to take account of tax that consumers would otherwise pay on income from their pension. Typically, 25% of the loss could have been taken as tax-free cash and 75% would have been taxed according to Mr S's likely income tax rate in retirement – presumed to be 20%. So making a notional deduction of 15% overall from the loss adequately reflects this.

Our investigator recommended that David Stock should pay Mr S for the distress and inconvenience caused by the unsuitable advice. I have considered the impact this would likely have had on Mr S in his particular circumstances. This pension at the time represented most of his retirement provision. In his situation I think the thought of losing material benefits would have impacted upon Mr S. So I agree the recommended payment of £300 for distress and inconvenience. David Stock should pay Mr S this amount in addition to the redress I've set out above.

Where I uphold a complaint, I can award fair compensation of up to £170,000, plus any interest and/or costs that I consider are appropriate. Where I consider that fair compensation requires payment of an amount that might exceed £170,000, I may recommend that the business pays the balance.

### **My final decision**

Determination and money award: I am upholding this complaint and I now direct David Stock & Co Limited to pay Mr S the compensation amount as set out in the steps above, up to a maximum of £170,000.

Recommendation: If the compensation amount exceeds £170,000, I also recommend that David Stock & Co Limited pays Mr S the balance. I would additionally recommend any interest calculated as set out above on this balance to be paid to Mr S.

If Mr S accepts my final decision, the money award becomes binding on David Stock & Co Limited.

My recommendation would not be binding. Further, it's unlikely that Mr S can accept my decision and go to court to ask for the balance. Mr S may want to consider getting independent legal advice before deciding whether to accept any final decision.

Under the rules of the Financial Ombudsman Service, I'm required to ask Mr S to accept or reject my decision before 21 November 2023.

Michael Campbell  
**Ombudsman**
